STARTUP ASSIGNMENT

THE IDEA

Technology solution for temporary access to high-cost equipment

Problem Statement: Students and young users often require expensive gadgets and equipment for short-term use such as academic projects, competitions, skill development, events, or personal productivity.

Existing Challenges:

- Purchasing expensive equipment for temporary use is financially impractical
- College labs and shared resources have limited and sometimes no availability
- Informal borrowing is unreliable and unstructured

Impact: This leads to financial strain, reduced participation in opportunities, and inefficient utilization of existing resources.

FRAMEORK: I WANT THIS SOLUTION

- **Problem-first innovation** – Built to solve a real student pain, like Linux
- **Shared resource framework** – Access over ownership
- **Community-driven model** – Institutions & users contribute equipment
- **Centralized platform** – Structured listing & access (GitHub-like)
- **Time-based usage** – Rent → use → return
- **Open & scalable system** – Can grow across colleges and cities
- **Efficiency-focused** – Reduces cost and resource waste

EVALUATION OF THE IDEA

How Big Is This Idea?

- Addresses a common short-term equipment need among a large student population
- Scalable from individual campuses to broader city-level residential users

How Sure Are We Solving a Problem?

- Informal borrowing already exists, indicating unmet demand
- Expensive equipment is often underutilized
- No structured and trusted platform exists for short-term access

Why Is This Team Eligible to Solve This Problem?

- Direct personal experience with the problem as students
- Clear understanding of campus needs and usage patterns
- Ability to validate and iterate the idea within the student community

THANK YOU
